

**vPresence**<sup>™</sup>  
*Virtual Desktops*

Virtuon vPresence provides a full spectrum of virtual desktop capabilities. Whether you are using a tablet, smartphone, laptop, or thin client, vPresence delivers a complete desktop experience.

Desktop virtualization allows organizations to stay focused on unique business offerings and have peace of mind that desktop services are mission-critical ready.

- » Provide instant access to desktops, anywhere, and from any device
- » Automate desktop and application deployment
- » Improve workflows and lower operating costs
- » Centralize desktop control and security
- » Ensure business continuity and desktop recovery

Virtualization technologies allow IT leaders to quickly respond to changing user needs while maintaining control, flexibility and security.

Industry projections indicate over 50 million virtual desktops will be in use in the next few years. If your organization has not virtualized its desktops, you are behind the curve.

### User Benefits:

- » Always On
- » Follows User
- » Any Device
- » Latest Features

### IT Benefits:

- » Simplified Management
- » Enhanced Security
- » Business Continuity
- » Cost Savings

## Cloud Computing and Virtualization

In its most basic form, the cloud can be described as on-demand computing for anyone with a network connection. Clouds may be public or private. Generally, private clouds exist within an organization, while public clouds exist to provide services to users outside of an organization.

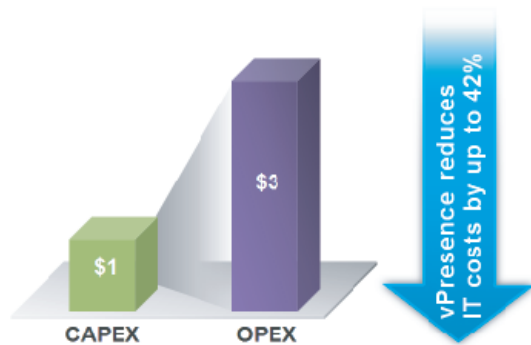

Cloud computing and desktop virtualization are being applied across industries as leaders capitalize on the effectiveness of these solutions. Using the cloud and virtualization, organizations and individuals can utilize their IT infrastructure in a flexible, cost-effective, and scalable manner.

### Key vPresence Features:

- Hosted Windows desktop
- Secure remote access
- Network and desktop security
- Business continuity and recovery
- Daily backup
- Administration support
- Server and network infrastructure

## CapEx versus OpEx

For every \$1 spent on hardware, companies typically spend \$3 to manage the hardware and the associated support.

vPresence helps reduce IT operational expenses and delivers up to 42% reduction in total cost of a desktop.

## Going Green

Reducing carbon footprint is becoming a necessity. Going green not only improves an organization's image and meets corporate and government mandates but reduces expenses.

vPresence optimizes hardware and energy consuming resources within an on-demand computing utility. Traditional server-sprawl and underutilized resources are never an issue with the cloud-based vPresence service.

Going green is smart business and it benefits everyone. We all do our part to conserve resources for our benefit now and in the future.

### Return on Investment

Cloud services improve the bottom line by reducing hardware and operating costs by as much as 50% and energy costs by 80%. Virtual desktops reduce the total cost of ownership of a single-user device by 42%\*.

\* IDC Estimates

### Future of Desktop Computing

In the next 4 years, 25%\* of all new computing devices will use virtual desktops. During that same time, usage of virtual desktops will expand to 50 million\*.

\* Morgan Stanley and Gartner Estimates

### Business Continuity

Business continuity is accomplished by applying disaster recovery, high availability and data protection systems. Disasters and unplanned downtimes cripple your business. Protect yourself and your business by employing cloud-based virtual desktops.
